Why do stars twinkle like glitter?	Stars Twinkle, because the light travels to the earth atmosphere, the air moves intense than the light, making the stars like twinkling.	Stars twinkle because of Earth's atmosphere wiggling their light. It's like they're saying, "Hello!" with a little sparkle!	Stars twinkle like glitter because their light has to travel through Earth's atmosphere, which can make it shimmer and twinkle. It's like the stars are winking and sparkling in the night sky!	Stars twinkle because of the Earth's atmosphere. When we look at the sky, we are not only seeing the stars, but also the air pockets in the atmosphere. These pockets of air have different temperatures, causing the light from the stars to bend and flicker as it travels to our eyes. This is why stars appear to twinkle.
Why do giraffes have such long necks?	Giraffes have long necks reach it higher than the trees, it like having the built-in ladder to reach yummy foods.	Giraffes have long necks to reach tall trees for yummy leaves! Like having a built-in ladder!	their favorite leaves to eat. Their long necks also help them spot predators from far away in the wild!	Giraffes have long necks for several reasons. One is that their long necks allow them to reach leaves and branches that other animals carnt, giving them an advantage when it comes to finding food. Another reason is that their necks help them keep an eye out for predators - with a long neck, they can spot danger from far away. They also use their long necks to communicate with each other and establish dominance within their herds. And finally, long necks are believed to be a result of natural selection and evolution, as giraffes with longer necks were more likely to survive and pass on their genes.
